

Title: High School General Knowledge Quiz.

Program:

```
import java.util.Scanner ;  
public class SimpleQuiz {  
    Scanner = new Scanner (System.in);  
    int score = 0 ;  
    String[] questions = {  
        "What is the Chemical symbol for Gold (eg., Ag, Au, Fe,  
        "Which is the largest ocean on Earth?",  
        "Who wrote the play 'Romeo and Juliet'?",  
        "What is the square root of 64?",  
        "What is the capital city of France?",  
    };  
    String[] answers = {  
        "Au",  
        "Pacific",  
        "Shakespeare",  
        "8",  
        "Paris"  
    };
```

```

System.out.println("Welcome to the High School  

Grk Quiz");
System.out.println("-----");
for(int i=0; i<questions.length; i++){
    System.out.println("Q" + (i+1) + ": " + questions[i]);
    System.out.print("Your Answer ");
    String userAnswer = scanner.nextLine();
    if (userAnswer.trim().equalsIgnoreCase(answers[i])){
        System.out.println("Correct!");
        score++;
    } else {
        System.out.println("Wrong! The correct answer  

was: " + answers[i]);
    }
    System.out.println();
}
System.out.println("-----");
System.out.println("Quiz Finished!");
System.out.println("Your final score: " + score + "  

out of " + questions.length);
scanner.close();
}
}

```
